STATIN THERAPY FOR ENHANCING COGNITIVE MAINTENANCE

The present invention relates to a method of treating dementia or a memory disorder
10 comprising administration of a therapeutically effective amount of galantamine (I) and
a statin (II). The invention further relates to products containing as first active
ingredient galantamine (I) and as second active ingredient a statin (II), as combined
preparations for simultaneous, separate or sequential use in the treatment of patients
suffering from Alzheimer's disease or related dementias; to related pharmaceutical
15 compositions and uses.
